Topic? The occurrence of conditions which affect movement (such as tremor) in people with Di George syndrome. This is approved by an NHS research ethics committee.

Who? People age over 18 years with Di George syndrome (22q11 deletion).

What would it involve? Answering questions about your health, taking a test of your sense of smell & having a brief neurological examination. In total about 60 minutes of your time.

Why? To improve our understanding of how adults are affected by Di George syndrome.

To participate or for more info please contact Dr Alisdair McNeill (Consultant in Clinical Genetics, Sheffield University) on a.mcneill@sheffield.ac.uk or phone 0114 222 2230 (leave message)
